# Release Notes
For Uinta Windows 1.5.3

These notes include important information for Juniper Systems' release of Uinta 1.5.3 for Windows 10.

Documentation and software updates are located on the Juniper Systems website:

https://junipersys.com/support/uinta

Bug Fixes

■ Corrected data synchronization problems when cloud server is down or under maintenance.

Known Issues

■ **Backwards compatibility:** Devices sharing data in a cloud project should use the same version of Uinta. New features in Uinta 1.5 and later are not backwards compatible and could cause older versions to crash.

■ **Large data sets:** Importing large data sets (10,000+ features/records) into a cloud project is not recommended at this time. Using offline reference layers such as mbtiles is preferred. This issue will be addressed in a future version. Please contact Juniper Systems if you need help supporting large data sets.
