

# Release Notes

## Uinta™ Data Collection and Mapping Software 2.0.0

### Windows & Android

These notes provide important information for Juniper Systems' release of Uinta 2.0.0 for Windows and Android.

Documentation and software updates are located on the Juniper Systems website:

<https://junipersys.com/support/uinta-training>

### New Features and Enhancements

- **Individual User Accounts.** Use the app or Juniper System's website to create and log in to accounts.
- **Subscription-based Licensing.** Licenses assigned to specific user accounts replace device-based license keys. Licenses can be managed through the License Manager (<https://licensing.junipersys.com>). Invite new users from either the app or the License Manager.
- **Free Trial.** New accounts can activate a free 7-day trial of the app.
- **Cloud Project Sharing.** Projects can be shared to other user accounts without needing individual passwords for cloud accounts.
- **Administrative Project Roles.** Cloud projects can be shared to other user accounts with or without administrative privileges. Users without administrative privileges cannot modify the template or access settings for the project.
- **New Database Format.** The Uinta project file format has been updated to facilitate new features (e.g. user roles and permissions, project sharing).
  - Old project formats require a migration to the new file format to be used with Uinta 2.0.0.
  - Old template json files are not compatible with Uinta 2.0.0.
- **Updated Project List UI.** The project list displays the current status of a project, including any changes pending for cloud upload or download.

View projects available in the cloud when connected to the internet.
- **Convert Local Projects to Cloud Projects.** Projects can be created locally (with or without internet connection) and then later uploaded to the cloud and shared with other users.
- **Cloud Project Deletion.** Delete cloud project without contacting support.

- **Cloud Project Renaming.** Cloud project names can be changed.
- **Comprehensive Text Search.** The quick text search now searches for text in all types of record fields, not just text-based field types.
- **Search Result Limit Increased.** The search screen displays up to 1000 search results. (No longer limited to 350.)

## **Fixes**

- Several bug fixes and stability improvements
